

As women, millions of us suffer from vaginal irregularities that impact our daily lives. What if there was one brilliant solution to what seems like complicated 'lady part' problems? From **eliminating urinary incontinence to increased sensation and natural lubrication** for enjoyable sex (again); **vaginal rejuvenation is the answer for women with weakened vaginal muscles** caused by aging, menopause, and childbirth.

There are several surgical options to repair a women's damaged pelvic region. However, surgery to address a loosened or enlarged vagina, known as vaginal relaxation syndrome (VRS), is simply unnecessary in many cases and not worth the risk. Medical advancements for this previously taboo subject **delivers direct laser energy to weakened vaginal tissue**. The FemiLift™ procedure provides women with a **safe and effective, no-knife option for vaginal rejuvenation**.

What is FemiLift™ Vaginal Rejuvenation?

The revolutionary FemiLift™ is a laser sleeve inserted into the vagina to **stimulate collagen renewal** with fractional CO2 laser energy pulses for a deep thermal effect without irritating or damaging sensitive surface tissue. The whole procedure is **painless no down time**. Most women achieve **optimal results in three separate treatments** over a three-month period. Vaginal rejuvenation with FemiLift™ has given so many women the benefits of:

- A Reduction of Recurring Infections
- Enhanced Muscle Tone and Elasticity

- Improved Control for Urinary Stress Incontinence
- Pleasurable, Pain-Free Sex!

Women of every age, socio-economic background and profession have **greatly benefited from non-surgical FemiLift™** Vaginal Rejuvenation. **FemiLift™** is the perfect alternative to costly and invasive surgery for restoring and rejuvenating of your delicate vaginal tissues.

What to Expect for Your FemiLift™ Procedure

The **FemiLift™** procedure is painless and **does not require anesthetic or numbing**. Your visit will **begin with a full vaginal exam**; your physician will then **recommend the number of treatments necessary** to achieve the optimal results. While **the actual procedure only takes about 15 minutes**, you can expect to spend about 30 minutes total in the office. **After your treatment you can resume everyday activities** but it is recommended that you **wait 72 hours before sexual activity**.

Kelly Lance, CPN at **La Belle Vie**, located in Draper, Utah was the first to bring the **FemiLift™** procedure to the Beehive state, and has since **improved the lives of so many women**, including Kathleen, 62 from Utah: **Age 62**– So happy I found Kelly! *“The FemiLift was exactly what I needed to rejuvenate my thinning vaginal walls. Well worth the money. My new healthy vaginal tissue significantly reduced painful intercourse and spotting. Kelly is professional and sensitive. She really cares about me and makes me feel comfortable talking about my personal female health issues.”*
